

## Oficiálne vyhlásenie o autorstve - Geolimit

### # Geolimit

**Geolimit** is an open concept designed to automatically limit vehicle speed in towns and sensitive areas using technologies such as geofencing, satellite navigation, and electronic power limitation.

The goal is not profit, but the protection of human lives – especially children, seniors, and vulnerable road users.

---

### ## Vision

Imagine a world where technology doesn't force, but protects. Where a vehicle automatically slows down upon entering a town – not by force, but by intelligence. No fines, no accidents, no losses.

---

### ## Project Status

Concept: **in preparation**

Whitepaper: **under development**

Code: **to be added later**
